

## Alhassan Kamilu

My name is Alhassan Kamilu, a graduate of University for Development Studies (UDS), Ghana. I studied Applied Chemistry. Apart from financial assistance provided by the EPI scholarship, the seminars organized periodically every trimester for beneficiaries helped to instill discipline. We learnt from these seminars that self-discipline is a recipe for success as far as Goal Setting, Time Management amongst others are concerned. Also, a requirement of EPI scholarship is that beneficiaries maintain a particular grade point average every trimester, this compelled me to work hard and perform well academically to achieve my academic goal of completing my first degree with a grade point average above 4.0 within the allotted time.

I chose to study Applied Chemistry at the University for Development Studies despite the numerous available courses because of the versatile nature of Applied Chemists. As an Applied Chemist, I have numerous opportunities and can easily pursue any field of study.

Starting an entrepreneurial activity such as liquid soap production or getting employed by a firm, company or industry where my skills could be efficiently utilized is my career goal and attaining professorship in my field of study is my future goal.

In my community, I intend to serve as a role model for students and advocate for children of school-going age to be enrolled in school. Also, I intend to venture into entrepreneurship to provide employment for myself and other graduates in the country. Furthermore, I can take up the role of teaching in any of the Senior High Schools nationwide where I will impart knowledge and skills to students and therefore help to develop the human resource of Ghana.

I therefore extend my gratitude to the Educational Pathways International. I am very appreciative of your support and I will strive hard to be able to offer a helping hand to brilliant and needy students someday.
