

ESTHER OWUSU

The unforgettable day in my life was when I got the message that I qualified as a recipient of Educational Pathways International (EPI) scholarship. I still remember that day like it was yesterday, finding myself in a lab session all drained out. It really enlightened my day and brought unwavering hope. I realized henceforth my dream of getting tertiary education and being the first female Engineer in my family has come true.

My name is Esther Owusu. I studied Food Process Engineering at the University of Ghana. EPI has aided me to be the best I could ever be. Joining EPI has made me realise that hard work makes goals possible. EPI has groomed me to be a better person and consciously taught me distinctive skills which made me manage my life on campus well. It has molded me with skills needed in the corporate world since I did internships to have field experience and practical applications of all lessons I learnt on campus.

I chose my Programme because it falls in line with my career goal to be an Engineer. I intend to create more awareness among females taking Engineering Programmes since males dominate in my sector. Again, I will utilize the knowledge I acquired to add value to raw foods to mitigate high losses faced by local producers since food is the most essential component for human survival.

I am forever indebted to the EPI family and glad for their support in every step of the way.

LONG LIVE EPI FAMILY!!!
