

## DR. EMMANUEL ARHIN

I am Dr. Emmanuel Arhin, a recent graduate of the Doctor of Pharmacy programme at Kwame Nkrumah University of Science and Technology, Kumasi- Ghana and a beneficiary of the Educational Pathways International Scholarship programme (EPI). With EPI, studies became much easier as the burden of financial instability was no longer an issue of concern. EPI did not only take care of my financial issues but made sure I obtained certain skills and knowledge that are necessary in life. These include socialization skills, curriculum vitae writing, report writing, interviewing skills, public speaking skills, financial management and investment skills, and the essence of giving back to society by volunteering and helping others.

Pharmacy is a programme that builds one into complete scientist that can fit into any area of the health sector and other areas such as research, drug development, marketing and more. The bedrock of this programme is chemistry and biology and these were the courses of my interest when I was in the senior high school. Now, being a Pharmacist, I hope to continue my education even as I practice as a clinical pharmacist. I am also enthused with business and I hope to venture into pharmacy business and other businesses as the ideas come along and even getting to the point of having my own pharmaceutical company that will be recognized by the world. I hope to becoming a world recognized philanthropist who will be giving back to the society as I have been given; by educating the society, offering health screening services, mentorship programmes and offering financial assistance where necessary.

I want to express my profound appreciation to Educational Pathways International, for bringing me closer to my dreams and aspiration. I did not know how these dreams were going to be realized but now I am sure of where I am going and I am confident that every aspiration of mine is possible and I will work hard to make EPI proud.

Long live Educational Pathways International, long live Ghana.
