

JANICE OSENKOR ANUM

Right from my days in senior high school, I dreamt of achieving higher education in a second cycle institution. This led to my diligent research and preparation which landed me into Kwame Nkrumah University of Science and Technology, Kumasi- Ghana.

My name is Janice Osenkor Anum and I obtained a first-class honors Bachelor of Science degree in Biochemistry.

I developed an interest in Science when I was offered the option to read general science in high school. This stimulated my interest in pursuing Human Biology just so that I can administer quality healthcare to patients. Although I did not get into medical School, Biochemistry open to

me an array of opportunities through which I contribute in advancing healthcare and thereby still providing the opportunity to partake in administering quality healthcare with courses like molecular biology and immunology just to mention a few which was taught.

In the course of my studies, the university environment provided me with the opportunity to serve and give back to community even while studying. I had the opportunity to volunteer with some clubs and societies helping to create awareness on various topics that apply to the Ghanaian community. I also had the opportunity to hold some two positions which I cherished so much because of the impacts it brought. These were deputy health officer for both the science student association-KNUST in 2023 and for the student representative council-KNUST in 2024. With this we were able to organize a basic life support training and a health screening exercise with the support of the school's management and the municipality. Anytime I think back on that day I get overwhelmed with the number of students we reached out to.

Research is one area I was introduced to in the course of obtaining this degree and as such, I aspire to enter into this field. I took steps in ensuring this which has led to me rendering my national service, which is a requirement after completion of a degree in my country, at a reputable research institution in Ghana. From this I look forward to polishing my skills on several taught course which are offered at the institution. From here I aspire to continue to gain knowledge and in depth training in specific field of science I believe will impact and develop my potentials in administering good healthcare. As such, graduate school is one of the areas I am looking at to help me realize this dream.

I would like to use this opportunity to express my uttermost gratitude to Educational Pathways International (EPI) for their unwavering support committed to me throughout my

course of studies. Without EPI, I would probably not be writing this beautiful profile of mine. EPI stepped into my educational life and supported me in order to realize the full potential of my gifts. I am grateful for the financial aid which has made it possible to complete my course. I am also grateful for the sessions we had with my country director which imparted core soft skills like time management, emotional intelligence and other relevant skills which helped me to sail through school. I can't forget also my academic potential that was fully realized through this scholarship which is evident in my transcript. My heart is filled with gratitude anytime I think of Educational Pathways International and I want to say thank you to all partners and sponsors who made it possible.
