

OBED SEFAH ABOAGYE

Obed Sefah Aboagye is my name from Kwahu in the Eastern region of Ghana, a Biotechnology and Molecular Biology student who just graduated from the University for Development Studies in the Northern region of Ghana.

My life has greatly been transformed since I joined Educational Pathways International (EPI) Scholarship. The support I have received did not only eased financial burdens but has also provided me with invaluable mentorship and resources.

This scholarship programme has instilled in me a sense of purpose and resilience, pushing me to excel academically and personally. I have developed critical skills that have shaped my

approach to challenges, fostering a growth mind-set that I carry into all aspects of my life.

I chose to pursue Biotechnology and Molecular Biology because of my passion for finding solutions to health conditions of people in our society and helping to contribute to their wellbeing. This programme aligns with my interests and strengths, allowing me to explore my capabilities while contributing positively to society. The course has equipped me with the necessary knowledge and skills to tackle real-world issues, further motivating my academic journey. I aspire to leverage my education and experiences to make meaningful contributions to the health sector.

In the long term, I envision myself in a position where I can influence policy or drive innovation that addresses critical challenges facing our communities. My career goal is to become a biotechnologist or a researcher, researching into new ways and forms of curbing global health issues such as cancer, covid, genetic disorders among others. This will help improve upon the health of our society and the globe at a whole.

In addition to my ambitions, I am deeply committed to giving back to my community and Ghana as a whole. I plan to initiate health programs so to help educate people on STIs, viral diseases, malaria, pandemics among others to build their knowledge on these conditions which will help allow them prevent certain diseases that has been battling the society for a long time. My hope is to empower individuals and promote sustainable development. By collaborating with local organizations and stakeholders, I aim to create lasting change that uplifts those around me.

I would like to express my heartfelt gratitude to EPI for their unwavering support and belief in my potential. The opportunities provided through this scholarship have been instrumental in shaping my academic journey and personal growth. I am immensely grateful for the chance to be part of such a transformative programme and a family, and I look forward to making a positive impact as a proud representative of EPI.
